

The claimed recording contains no journey

The two archived WebP copies are single-frame placeholders, not playable interaction evidence.

ACTUAL FILE INSPECTION

960 × 960 pixels
11,418 bytes
1 frame; not animated
Visible text: “Generating recording...”

SOURCE COVERAGE: 35 / 44 PAGE LAYOUTS

Bangla desktop	11
Bangla mobile	11
English desktop	11
English mobile	2

Plus two drawer overlays.
The report claims 38 pages plus one overlay.
Nine English mobile page combinations are missing.

Decision: retain genuine improvements; do not approve the package as completed Figma work.

The English export excludes source screens

SVG source: 6400 × 7300 px. Supplied PNG: 4800 × 6200 px. Exact canvas parity is disproven.

SOURCE GEOMETRY / SHADED AREA IS OUTSIDE THE PNG

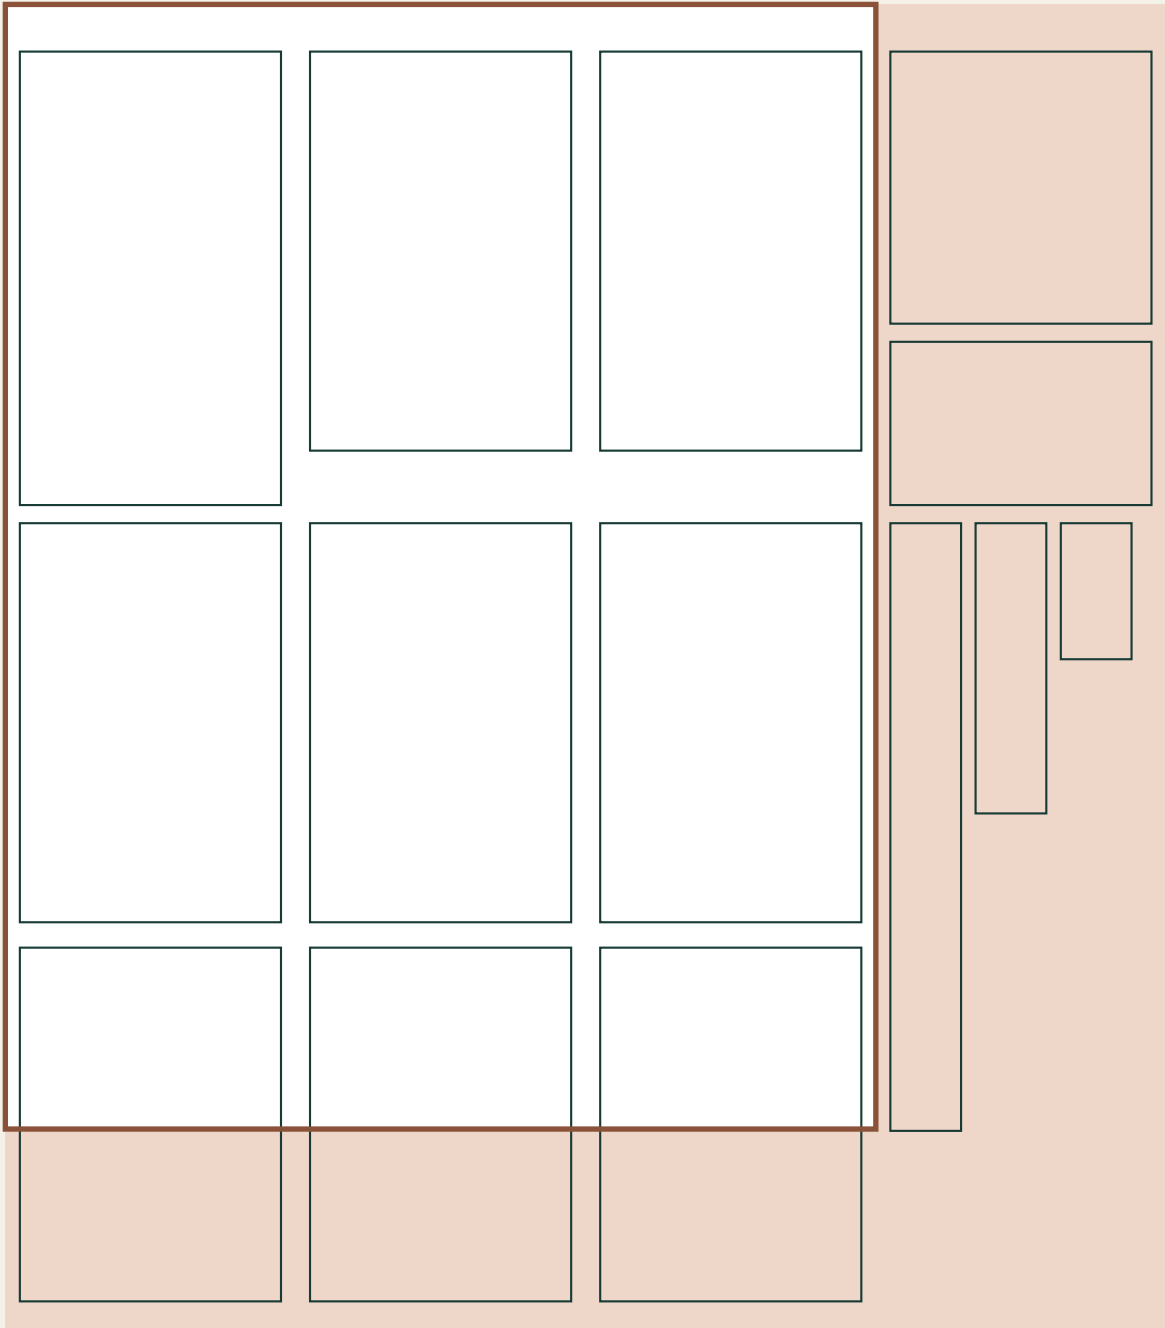

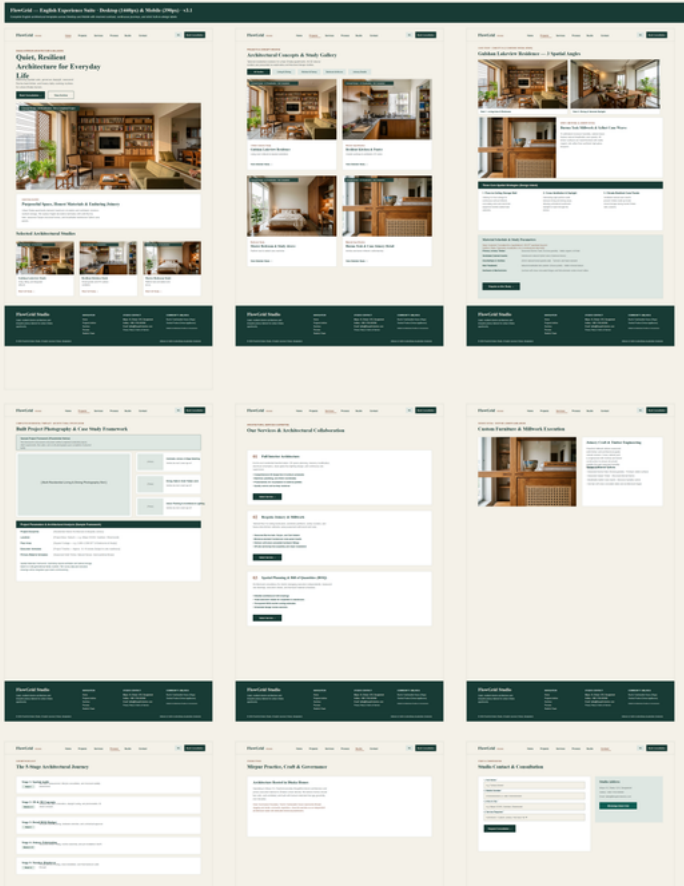

Diagram uses the actual SVG frame rectangles.

SUPPLIED PNG: RIGHT COLUMN AND BOTTOM CONTENT ABSENT

The right column starts at x=4880:

- Desktop privacy and 404
- Mobile home, archive and drawer

The PNG ends at x=4800, before that entire column.

The bottom row extends to y=7150; the PNG ends at y=6200.

The PDF labels the wrong mobile crops

Slide 7 uses real crops, but its study and contact previews do not show the promised screens.

SUBMITTED PDF / SLIDE 7

Third panel: built-project placeholder. Fourth panel: empty space and footer; no form.

The actual concept study and contact design exist elsewhere on the board.

The screenshot index uses incorrect coordinates for the revised layout.

These previews cannot support the claims of complete journeys or zero blank intervals.

REQUIRED CORRECTION

Crop the current frames, verify the content of every preview, then rebuild the PDF.

A readable viewport crop is useful; it should not be described as proof of the full page or all form states.

New assets were not propagated into page designs

All 39 embedded image occurrences in Boards 03–05 match old revision 3 assets; Board 07 uses the new set.

OLD IMAGE STILL EMBEDDED IN PAGE BOARDS

The new JPEGs are 1376 × 768 px, not 8K.

VERIFIED IMPROVEMENTS

- Five new concept files and more source layouts.
- Main mobile inputs now 48px; submit button 52px.
- Notice, error-card and drawer collisions improved.
- Footer text colours now pass contrast checks.

NEW STANDALONE LIVING CONCEPT

REMAINING PROTOTYPE DEFECTS

- Phone “abcdefgh” advances to simulated success.
- No “Not sure yet” option or modal focus trap.
- No reduced-motion media query.
- Services / process / studio links lack targets.

Full methods, evidence limits, corrected counts and acceptance requirements are in the companion report.
